SALES ANALYTICS

Excel Mini Project | Turning sales data into useful insights

Presented by: **N.AKHILA**

Date: 30-10-2026

DATA • PATTERNS • DECISIONS

Project overview

A structured Excel workflow to understand sales performance

THE BUSINESS QUESTION

How can we quickly understand sales performance across time, regions, products, employees and payment methods?

WHAT I DID

- Combined monthly sales files into one dataset.
- Calculated useful measures such as revenue, cost, profit and margin.
- Summarized performance with PivotTables, charts and filters.
- Designed a dashboard for quick comparisons.

RAW DATA
CLEAN & CALCULATE
ANALYZE
PRESENT

Objectives and data structure

Reliable data comes before meaningful analysis

01 Combine

Append monthly sales files into one transaction table.

02 Enrich

Use product, customer and employee master data where available.

03 Analyze

Compare results by month, region, product and employee.

CORE FIELDS

Order details	Order ID • Order Date
Sales values	Quantity • Unit Price • Revenue
Business dimensions	Product ID • Customer ID • Employee ID
Segments	Region • Payment Method • Sales Channel

Data preparation and calculations

Consistent data helps prevent misleading totals

DATA CHECKS

- Check missing values and duplicate IDs
- Standardize dates, text and number formats
- Confirm discount and revenue definitions
- Validate master-data matches

CALCULATED FIELDS

Gross Sales = Quantity × Unit Price Total Cost = Quantity × Unit Cost Profit = Revenue − Total Cost Profit Margin = Profit ÷ Revenue

IMPORTANT

Use the actual column names in your workbook. If Revenue already includes the discount, do not subtract the discount again when calculating Profit.

01 **Inspect**

02 **Clean**

03 **Validate**

04 **Document**

Key performance indicators

KPIs provide a quick summary of business performance

TOTAL REVENUE

Sum of net revenue

Sales generated

TOTAL ORDERS

Count of unique orders

Order activity

TOTAL PROFIT

Revenue − total cost

Profit contribution

UNITS SOLD

Sum of quantity

Sales volume

PROFIT MARGIN

Profit ÷ revenue

Profitability

AVG. ORDER VALUE

Revenue ÷ orders

Average order size

Before presenting, fill in the actual KPI values from your validated workbook.

Dashboard design

Choose each visual to answer a specific business question

1

Monthly Revenue Trend

Line chart • How does revenue change over

2

Revenue by Region

Clustered column • Which regions contribute

3

Top 10 Products

Horizontal bar • Which products lead by

4

Employee Performance

Bar chart • How do employee results

5

Payment Method

Doughnut chart • How are payments

6

MoM Growth

Line chart • Is revenue increasing or

Interactivity and scenario analysis

Make it easy to explore results and ask follow-up questions

DASHBOARD CONTROLS

- Add slicers for Region and Sales Channel
- Add a Timeline for Order Date
- Connect filters to relevant PivotTables
- Keep chart titles and number formats consistent

WHAT-IF REVENUE SCENARIOS

Current Revenue × (1 + Growth Rate)

Compare scenarios such as 0%, 5%, 10% and 15% growth.
Label results as estimates, not guaranteed outcomes.

GOOD PRACTICE

Keep filters visible, avoid overcrowding, use a consistent color palette, and check that every chart updates correctly when a slicer or timeline is selected.

FILTER → COMPARE → EXPLAIN

Insights and recommendations

Use evidence from your dashboard–not assumptions

ADD YOUR VERIFIED FINDINGS

1 **Finding 1** The highest-revenue product or category is LAPTOP.

2 **Finding 2** The strongest region / month is EAST & JANUARY.

3 **Finding 3** Revenue growth or decline observed: GROWTH-216%, DECLINE-181%.

RECOMMENDATIONS

- Investigate unusually high or low values before drawing conclusions.
- Refresh PivotTables and confirm totals after data changes.

- Use the dashboard to support decisions about products, regions and sales trends.

CONCLUSION

From raw sales data to clear business insights.

This project helped me practice data preparation, Excel formulas, PivotTables, charts and dashboard design.

01 **Data quality matters**

02 **Visuals make patterns easier to see**

03 **Insights should be backed by data**
